linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity). SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4 (incomplete).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            J. Virol. 68:84-92(1994).
-!- FUNCTION: Induces endothelial proliferation.
-!- SUBUNIT: Homodimer; disulfide-linked (By similarity).
-!- SIMILARITY: Belongs to the PDGF/VEGF growth factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        157 STSYISKQLFEISVPLTSVP-----ELVPVKVANHTGCKCL 192

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polypeptides comprising an epitope-bearing portion human or murine ZVEGF3 (vascular endothelial growth factor homologue) are claimed. The growth factor domain and a CUB domain (generic sequence comprises a growth factor domain and a CUB domain (generic sequence motifis are shown in AAY9686). The growth factor domain is characterized by an arrangement of cysteine residues and betastrands that is characteristic of the "cysteine knot" structure of the platelet-derived growth factor (PDGF) family. The CUB domain shows homology to CUB domains in neuropilins, human bone morphogenetic protein.

I, porcine seminal plasma protein, bovine acidic seminal fluid protein and Xenopus leavis tolloid-lins, bundan bone morphogenetic protein.

Compared that ZVEGF3 polypeptides complex with a second polypeptide to predict that ZVEGF3 polypeptides complex with a second polypeptide to circmosome 4q28.3 ZVEGF3 is useful for stimulating the growth of fibroblasts or smooth muscles cells, for activating cell surface PDGF-alpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZVEGF3 is useful for regulating (post-development) organ growth, regeneration and maintenance, as well as tissue maintenance and crepair processes. ZVEGF3 antagonists are useful for treating cancer, rheumatoid arthritis, diabetic retinopathy, ischemic limb disease, crepair processes. ZVEGF3 antagonists are useful for treating center growth chemmatoid arthritis, wound healing, chronic liver disease and heperplasia, atherosclerosis, wound healing, chronic liver disease and chemmangiona formation. ZVEGF3 can also be used to modulate neurite growth and development of the nervous system, and for treating neurodegenerative

The invention relates to the human growth factor homologue zvegf4

(AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member of the PDGF (platelet-derived growth factor)/VGGF (vascular endothelial growth factor) family. Zvegf4 has a growth factor domain (AAB4864)

C growth factor) family. Zvegf4 has a growth factor domain (AAB4864)

C characterised by a PDGF cystine knot structure, and a CUB domain (AAB48655) which has a beta barrel structure, and a CUB domain (AAB48655) which has a beta barrel structure, vacef4 has PDGF-like activity, having mitogenic activity on fibroblasts, vascular smooth muscle cells and pericytes, and has also been shown to stimulate bone of growth. The invention also relates to fusion proceins comprising human zvegf4 nucleic acids, the recombinant expression of human zvegf4 numan zvegf4 or fragments thereof, particularly human zvegf4 numan zvegf4 acids, the recombinant expression of human zvegf4 an antibody which binds to human zvegf4 or a fragment thereof; a method of activating a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a method of method of detecting a genetic abnormality in the coll between the proliferation, differentiation, migration or metabolism of polypeptides; and a method of detecting a genetic abnormality in the crowfile and polypeptides and a method of detecting a genetic abnormality in the crowfile and polypeptides and a method of detecting a genetic abnormality in the crowfile and method of detecting a genetic abnormality in the crowfile and method of detecting and derived fragments may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             used to stimulate tissue development or repair, or cellular treatment or repair of treatment or repair of liver damage, and may also be used to modulate neurite growth (e.g., in the treatment of Alzheimer's disease or multiple sclerosis). Due to their osteogenic activity, they may be used in the treatment of periodontal disease and fractures. They may also be used to enhance expansion and mobilisation of haematopoietic stem cells and endothelial precursor stem cells, which may be useful in the treatment of ischaemia, in wound healing, and in the modulation of the immune system.

The present sequence is the complete human platelet derived growth factor (PDGF)-D, formally known as Vascular Endothelial Growth Factor (VEGF)-G. It is derived from human feetal lung lambdagilo CDNA library. It belongs to the VEGF/PDGF family. It functions as an activator of proliferation, differentiation, growth and motility of cells, that express PDGF-D receptor. This sequence is useful for inhibiting the growth of tumours, that express PDGF-D. Expression of PDGF-D and its proteolytic cleavage for generating an activated truncated form is useful for regulating receptor binding specificity of PDGF-D. PDGF-D antagonist is useful for inhibitining tissue remodelling during the invasion of tumour cells into mormal cells. PDGF-D may be used to treat wounds, atherosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a platelet-derived growth factor, useful for diagnostic and therapeutic applications, e.g. concerning cancer.
                                                                                                                                                                                                                                       /label= CUB_domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a vascular endothelial growth factor (VEGF) family member, VEGF-G. VEGF-G protein and nucleic acid molecules are used as modulating agents or a targets for developing modulating agents or as targets for developing modulating agents to regulate a variety of cellular processes e.g. cell proliferation, differentiation, migration and wound repair. VEGF-G modulators, i.e. VEGF-G protein, peptide, peptidominetic or nucleic acid are used to treat a subject with aberrant VEGF-G protein or nucleic acid expression or activity e.g. deregulated cell growth, such as cancer, hyperptrophic bone disorders, disorders involving aberrant angiogenesis e.g. psoriaais, and chronic inflammatory diseases e.g. rheumatoid arthritis. VEGF-G gene expression is inhibited through the administration of antisense molecules or ribozymes and by targeting the regulatory region of VEGF-G to prevent transcription of the gene in target cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and treatment of deregulared cell growth e.g. cancer, disorders involving aberrant angiogenesis e.g. psoriasis, and chronic inflammatory diseases.

Human FCTR1 protein present in clone 30664188.0.99

07-SEP-2001 (first entry)

AAU00698;

```
The sequence represents a protein related to bone morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (WEG-E) and platelet derived growth factor (PDGF). Polypeptides and polynucleotides related to BMP-1, VEGF-E and PDGF are referred to as FCHRX peptides and nucleic acids.

C WEGF-E and PDGF are referred to as FCHRX peptides and nucleic acids.

FCTRX proteins are useful for treating or preventing a disorder.

C FCTRX proteins are useful for treating or preventing a disorder.

C FCTRX proteins are useful for the proteins in a mammal, where the alsorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, casociated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, albaldness, for treating cardiovascular and fibroric disorders, inflammatory disorders, neurodegenerative disorders, osteoarthritis, inflammatory disorders, neurodegenerative disorders such as haemophilia, and neural disorders including Parkinson's disease, allaheimer's disease, multiple solerosis, Huntington's disease, anyotrophic lateral sclerosis, peripheral neuropathy, acute brain injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 NGYVOSPRFPNGYPRULLTWRLHSQENTRIQLVFDNQFGLEEAENDICRYDFVEVEDIS 120

The sequence represents a protein related to bone morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (VEGF-E) and platelet derived growth factor (PDGF). Polygeptides and polymocleotides related to BMP-1, VEGF-E and PDGF are referred to as FCTRX peptides and muclic acids. FCTRX proteins are useful for treating or preventing a disorder associated with aberrant expression, aberrant processing, or aberrant physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for both promoting and inhibiting

The invention relates to the use of zvegf4 polypeptide for promoting bone, ligament or cartilage growth in a mammal, and for promoting bone, ligament or cartilage growth in a mammal, and for promoting cartilage or bone marrow stem cells in culture. For promoting cartilage growth, chondrocytes are cultured ex vivo in presence of the zvegf4 polypeptide and then placed into mammal where cartilage is to be grown. Zvegf4 polypeptide is useful for promoting growth of bone, ligament or cartilage in a mammal at a site of bony defect such as fracture, bone graft, implant or periodontal pocket, in humans and non-human animals such as domestic animals including livestock and companion animals. Zvegf4 is used for promoting growth of bone, ligament, or cartilage in conditions of bone defects following therapeutic treatments or decreased bone formation, or elevation of peak bone mass in premenpausal woman. It is also useful for healing bone following radiation induced osteonecrosis, repairing bone defects arising from surgery, and curing distraction osteogenesis, treating bone injuries including repair of cartilage and ligament and treatment of osteoporosis. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses materials and methods for reducing cell
proliferation or extracellular matrix production, treating fibrosis and
reducing stellate cell activation in a mammal. The method comprises
administering a composition containing a 2vegf3 antagonist in combination
with a delivery vehicle. The Zvegf3 as a protein that is structurally
related to platelet-derived growth factor (PDGP) and the vascular
endothelial growth factors (VGCP). The Zvegf3 protein is also designated
as "VEGF-R" and "PDGF-C". The Zvegf3 antagonist is useful to block the
mitogenic effects of zvegf3 and thereby to inhibit or prevent and treat
ce mitogenic effects of zvegf3 and thereby to inhibit or prevent and treat
ce habelis, sclerodderma, fibrotic disorders of liver such as chronic active
thepatitis, tulminant viral hepatitis, post necrotic cirrhosis and alpha-1
centitrypsin deficiency, fibrotic disorders of the kidney such as
chronical disorders of the viral arteriosclerosis, fibrotic disorders
contential such as silicosis, absetosis, idiopathic pulmonary hypertension,
fibrotic disorders of panoreas, fibroproliferative disorders of the
chasculature guch as transplant vasculopathy and fibroproliferative
disorders of the bone such as osteoperrosis and hyperostosis. The present

used to prevent, treat or ameliocate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in diagnosting a pathological condition. The antibodises to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, viruses and fungi and ardioimans disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, common chemotaxis. The polypeptides can also be used as a food additive or present preservative to increase storage capabilities. The present

The present invention relates to LPBS, an analogue of platelet-derived growth factor (PDGF) homologue. Sequences of the invention are useful for the manufacture of a medicament for treating musculoskeletal disorder (MSD) which include promoting bone growth, cartilage differentiation and function, wound healing, neuron growth, preventing cartilage degradation osteoporosis, osteopenia, arthritis, sarcopenia, por factures, tissue atrophy, traumatised connective tissues and/or transplanted organs, bone or muscle loss due to malignancy, endocrine disorders and immobility. They are also used for prophylactically increasing or maintaining bone density in a mammal. The present sequence is human LPBS protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Analog of a platelet-derived growth factor homolog, LPBS useful for treating osteoporosis, arthritis, sarcopenia, wounds, has one or more amino acid substitutions which destroy the tripeptidyl sequence of native

FCTR1 RNA is present in pituitary gland tissues, uterine microvascular endothelial cells, erythroleukaemia cells, thyroid, small intestine, lymphocytes, adrenal gland and salivary gland. The invention provides FGFCX and FCTRX growth factors, polypeptides and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Prayaga S, Boldog FL, Yang M, Burgess CE;

deletion variants, and methods of using these to treat, delay the onset of, or ameliorate, an inflammatory pathology, especially inflammatory bowel disease, a disease that occurs in the colon or small intestine, or Crohn's disease (all claimed). FGFCX and FCTRX polypeptides and deletion variants are also useful for treating growth and proliferative diseases such as cancer, angiogenesis, collagen formation, fibrotic and cardiovascular diseases or diabetic ulcers, and in wound healing. They can be used in screening and detection methods, chromosome mapping, tissue typing, predictive medicine, diagnostic assays, prognostic assays, and pharmacogenomics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241 LDTPRYRGRSYHDRKSKVDLDRLNDDAKRYSCTPRNYSVNIREELKLANVVFFPRCLLVQ

                                                                                                                                                             g
                                                                                                                                                                                          ò
                                                                                                                                                                                                                      р
                                                                                                                                                                                                                                                                                             The invention relates to an isolated polypeptide, designated zvegf3 (a vascular endothelial growth factor-like protein) of 111-136 amino acid residues in length and comprises the sequence appearing as AB632889 from residues in length and comprises the sequence appearing as AB632889 from residues in length and second polypeptide an isolated protein (c comprising a first polypeptide disulphide bonded to a second polypeptide, where each of the first and second polypeptides is from zvegf 3, and comprising an example of the protein medulates cell poliferation, differentiation, metabolism or migration, the zvegf 3 encoding polymoleotides and zvegf 3 expression vectors and host cells. Zvegf 3 is useful as additives in c fissue adhesives for promoting revascularisation of the healing tissue, for designing molecules that antagonise semaphorin-stimulated activities, including neurite growth, cardiovascular development, cartilage and limb development, and T and B-cell function, and for imaging tumours or other sites of abnormal cell profileration and in gene therapy applications. The proteins are useful therapeutically to stimulate tissue development or repair, or cellular differentiation or proliferation, for stimulating the growth of fibroblast or smooth muscle cells, as molecular weight correction or as standards in the analysis of cells, as uncommune growth of solid tumours, for treating diabetic retinopathy, glomerulosand atthritis, various forms of cencers, autoimmune cellbrosis, including scar formation, keloids, liver fibrosis, lung fibrosis, skin grafting, and female reproductive tract disorders, chronic liver disorders of chromation, wordsordal isohaemia, solaropathy), glomerulosclerosis, atherosclerosis, skin wounds, chospease, disease, dirculatory disorders of, heart failure, hepatic or portal vein thrombosis, cardiac sclerosis, neurodegenerating neurite outgrowths following strokes. The greener and for regenerating neurite outgrowths following strokes. The greener represents

Zvegf3 is a platelet derived growth factor (PDGF) homolog. The zvegf3 protein used was preferably a dimeric protein with a delivery vehicle. The method of th invention is useful for promoting growth of bone, ligament or cartilage in a mammal, where the composition is administered at a site of a bony defect, preferably a fracture, bone graft site, implant site, or periodontal pocket, and for stimulating proliferation of osteoblasts or chondrocytes in a mammal. It is further useful for promoting proliferation of osteoblasts,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; mouse; zvegf3; zvegf4; platelet derived growth factor; PDGF; homolog; growth; bone.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a new method of detecting the presence of 30664188 antigen in a sample. The invention is useful for detecting the presence of 30664188 in a biological sample (e.g. blood or its component originating from a mammal, preferably human), and for contributing to diagnosis of cancer in a subject. The present amino acid sequence represents a human FCTR protein, as described in the methods of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                        The invention relates to an isolated nucleic acid molecule which encodes a human secreted protein. The sequences are useful for diagnosing or diagnosing a succeptibility to a pathological condition in a subject comprising determining the presence or absence of a mutation in the DNA or expression of the protein. The sequences are useful for identifying a binding partner to the protein comprising contacting the protein with a condition partner of the protein comprising contacting the protein with a condition goartner effects an activity. The DNA and protein sequences are used for preventing, treating contacting whether the binding partner effects an activity. The DNA and protein sequences are used for preventing, treating confidence or ameliorating a medical condition such as an autoimune disease (e.g. afibrinogenaemia, haemophilia), blood platelet disorders (e.g. sarcoidosis, Sezary conformed), neurodegenerative disorders (e.g. Alzheimer's disease, kidney infarction), cardiovascular disorders (e.g. renal vein thrombosis, kidney infarction), cardiovascular disorders (e.g. renal vein thrombosis, kidney disorders (e.g. thyrobosics), reproductive disorders (e.g. cardiac arreet, carcinos), assular disorders (e.g. aneurysm, ischaemia), respiratory disorders (e.g. aneurysm, ischaemia), aneurodescence acromedally, thyrotoxicosis), reproductive disorders (e.g. genorites), anorchia), gastrointestinal disorders (e.g. genorites), anorchia), gastrointestinal disorders (e.g. genorites), anorchia) and cancer. Carcinosis), infectious diseases (e.g. polio, rubella) and cancer.
